

## R P Advanced Diagnostic Centre

# 3039-C, Bela Chowk,  
Ropar (Pb.) - 140 001  
Phone: 01881-506121, 223423

Equipped with latest 3D Spiral CT Scan  
Latest Ultrasound Machine, Colour Dop  
All types of X-Rays & Special Investigati

All investigations/scans have technical limitations, false positive or false negative interpretations & inherent inaccuracies. This report is an opinion and not a diagnosis. This report is not valid for Medicolegal Purposes.

**NAME: MS. GURPREET**

**CONSULTANT: DR PAWAN KUMAR**

**AGE/SEX: 31 Y/F**

**DATE: 22.08.2020**

### ULTRASOUND ABDOMEN

**LIVER** shows mildly bright echotexture. It is normal in size & contour. No obvious focal lesion is seen. Intrahepatic biliary radicles are not dilated.

**PORTAL VEIN** is normal at the porta.

**GALL BLADDER** shows normal physiological distension. Wall measures ~ 3.0mm (Border line). There are few echogenic foci not giving DAS seen in the lumen - s/o sludge. There is no pericholecystic lucency or collection at present.

**COMMON BILE DUCT** is normal.

**PANCREAS** is obscured by bowel gas.

**SPLEEN** is normal in size and echotexture. No obvious collaterals seen at the hilum.

**RIGHT KIDNEY** is normal in size (9.7cms), shape, outline & echotexture. Cortical thickness is normal. Corticomedullary differentiation is maintained. No obvious calculus / mass / hydronephrosis is seen.

**LEFT KIDNEY** is normal in size (8.7cms), shape, outline & echotexture. Cortical thickness is normal. Corticomedullary differentiation is maintained. There are calculi of app sizes 3.0mm seen in the mid calyx & 3.0mm in the lower calyx. No obvious mass / hydronephrosis is seen.

**URETERS** are not dilated at upper / lower ends.

**URINARY BLADDER** is partially distended. Grossly no obvious abnormal echogenic focus seen.

**UTERUS** is normal in size. It is anteverted & shows normal echotexture. Endometrium is central & measures 7.0 mm.

**RIGHT OVARY** is normal in size & echotexture.

**LEFT OVARY** is enlarged. There is a cyst of app size 34 x 27mm with internal echoes and septations - likely Hemorrhagic cyst.

No free fluid is seen in the abdomen & pelvis at present.

**IMPRESSION** Findings are suggestive of:

- Mild Fatty Liver.
- Sludge in gall bladder.
- Left renal calculi.
- Left Ovarian complex cyst. likely Hemorrhagic cyst.

  
DR HITESH BANSAL  
(CONSULTANT RADIOLOGIST).

## ULTRASONOGRAPHY (WHOLE ABDOMEN & TVS)

NAME	Mrs. Gurpreet	Age/Gender	32 Yrs / Female
Referred By	Dr. Sunil K. Khurana	Date	28/08/2021

**LIVER:** measures within normal limits and appears normal in shape, outline & position with fairly smooth / regular margins and reveals a fairly homogenous parenchymal echotexture. No discrete focal lesion could be appreciated within its parenchyma. No evidence of dilatation of IHBR / CBD. Porta appears normal.

**GALL BLADDER:** appears well distended & reveals normal anechoic pattern. Lumen appears echo free. Wall thickness appears essentially normal.

**PANCREAS:** appears normal in size, shape, outline & echotexture. Peri pancreatic planes appear fairly well preserved.

**SPLEEN:** appears normal in size, shape, outline & position with fairly smooth / regular margins and reveals fairly homogenous parenchymal echotexture. No discrete focal lesion could be visualised within its parenchyma. Splenic hilum appears normal.

**KIDNEYS:** The right kidney measures appx. 9.4 cm in size and the left kidney measures appx. 10.4 cm in size. *The left kidney appears duplex.* Both kidneys appear normal in shape, outline and position with normal echotexture & a fairly well defined cortico medullary differentiation. Pelvicalyceal system appears normal with well preserved sinus echo complex. No demonstrable mass lesion seen. No obvious calculi or calcifications could be seen.

**URINARY BLADDER:** appears fairly well distended and reveals a normal anechoic pattern with fairly smooth / regular walls. No evidence of any calculi or mass lesion seen.

**UTERUS:** is anteverted and appears normal in size, shape & outline. Myometrial echotexture appears essentially normal with no demonstrable mass. Endometrial echo complex appears unremarkable. Endometrial thickness is appx. 10.9 mms.

**OVARIES:** measure normal in dimensions and show normal echotexture. No demonstrable adnexal mass seen. No free fluid is seen in POD.

No significant abdominal lymphadenopathy seen. No evidence of any free fluid seen.

### IMPRESSION:

- Duplex left kidney.
- No other demonstrable localising lesion could be made out.

Please correlate clinically & with other relevant investigations also.

Dr. Rakhi Bhadada  
Consultant Radiologist
